

## Microsoft Teams

Microsoft Teams is the central hub for teamwork, bringing together chat, meetings, calling, collaboration, app integration, and file storage. It is an application that is provided as part of a subscription to Microsoft Office365.

Videocall can help deploy Microsoft Teams from your Microsoft Office 365 subscription across your business to improve your collaboration across desktop, mobile and your meeting rooms, ensuring that you are set-up for intelligent collaboration.

### Key Features

- Can be deployed as part of Microsoft Office 365 subscription
- Microsoft Teams is delivered from the Microsoft Azure Cloud
- Interoperability with Microsoft Office365 and all its productivity tools
- Designed with business collaboration in mind
- Third party integration and open API
- Teams provides advanced security and compliance to protect data and users

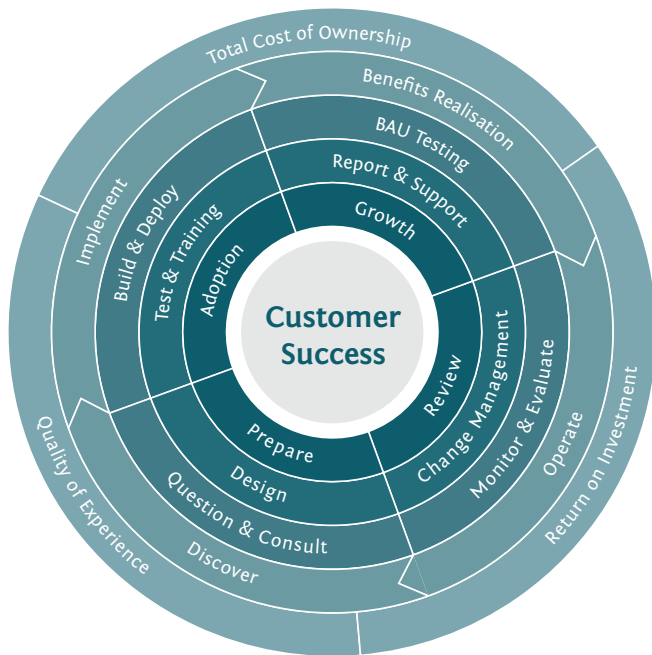

### Key Benefits

- Collaborate in real time through a number of mediums – Audio, video, persistent chat and file sharing
- Chat has been placed at the centre of Teams to help reduce the number of emails and to help everyone stay connected
- Workspaces are customisable so that individual users or teams can receive the information most important to them
- Users can connect to Teams from anywhere, allowing employees to be more flexible when required

### Videocall's Methodology

Videocall follow a process that has been designed to work in conjunction with the Microsoft Skype Operations Framework (SOF), which also works for Teams. We call it our Customer Success Formula.

Using this formula ensures that we provide a mapped out approach for deploying Microsoft Teams in any business by ensuring we follow the process of preparation, adoption, growth and review in a cyclic fashion.

### Microsoft Teams Rooms

Videocall can design, build, operate and support rooms and meeting spaces specifically designed to run Microsoft Teams. We are a Microsoft Silver Communications partner and will leverage our collaboration and video conferencing expertise to ensure that all spaces are fitted with technology that is not only suited to that space, but capable of carrying out the required actions, in the easiest and most reliable way possible. You can find out more about our room designs on our Room Integration page on the Videocall website.

### Traditional Video Conferencing Rooms (legacy equipment)

Videocall can support any enterprise business that has a video conferencing estate that contains traditional or legacy equipment (including mixed vendor estates) that is required to connect into a Microsoft Teams environment. We can protect existing investments and combine all collaboration services, ensuring that user experience and workflows do not suffer in the process.
