

Room Integration

Our Goal

Our highly skilled designers can create fully integrated, immersive room environments to optimise and utilise your video conferencing systems for exceptional quality of experience.

By analysing details of operating environments, including wall colours, lighting levels, optimised equipment layouts through to fully integrated control systems and complex audio services, Videocall can design and install audio and video environments from huddle rooms to boardrooms and theatre style auditoriums.

We can create full, bespoke Operation & Maintenance (O&M) manuals for your environments and support you with 24/7/365 technical support alongside guaranteed and SLA backed engineering and part replacement.

We create immersive audio visual room environments to support a simple-to-use, high quality, reliable experience.

Key Features

- Ergonomic room optimisation conducted by highly skilled Solutions Engineers
- Immersive audio and visual systems to enhance user experience
- Intelligent conferencing equipment to adjust to user volume, movement and background noise
- Fully integrated room systems to prevent user interference
- Touch pad room control
- Ongoing ITIL based support services available 24/7/365

Key Benefits

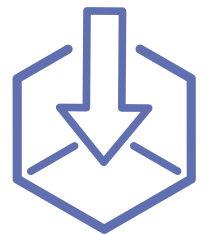

- Immersive, optimised meeting rooms provide users with a comfortable, easy to operate and versatile environment that will engage them with an audio and video collaboration culture
- Post installation training given onsite will ensure your user communities feel confident in the use of the systems for ultimate adoption
- 24/7/365 end user support and guaranteed next day on site SLA ensures your systems are usable at all times
- CSCS accredited engineers to fit your environments and provide onsite training
- Onsite training by qualified engineers

- Bespoke O&M manuals for your teams to use
- Larger projects managed by PRINCE2 project managers
- Bespoke control system
- Graphical user interface
- Sound re-enforcement & conferencing PA systems
- Wireless presentation and collaboration
- AV Furniture Inc. tables, credenzas and media walls
- No touch system integration for environmental controls
- Projectors, OLED, 4K etc
- Digital signage and IPTV solution
- Interactive displays and whiteboard
- Professional audio integration

Our Solution

Our Consultants and Solutions Engineers can ensure you optimise your working spaces by taking you through a room stratification journey. This will help you to identify your enterprises needs and create fit for purpose environments that will actually work to enhance communication and collaborations on the scales that you need.

This could mean enabling smaller spaces with a huddle room environment or creating multi format boardrooms that can be adapted for auditorium or town hall style meetings. Regardless of whether you need teaming spaces, training environments, telepresence suites or standard boardrooms, our skilled professionals will ensure that you will get maximum adoption and ROI on your communications system.
