

What can we do with Skype for Business?

Skype for Business is a widely-adopted unified communications platform for enterprise use. As a Microsoft partner, we have invested in a range of professional services to deliver the design, implementation and support of Skype for Business, either standalone or integrated with your other collaboration tools, including Office 365.

Our ICE services can integrate with Skype for Business, whilst maintaining the existing Skype for Business workflow for your users, creating a highly collaborative video meeting experience, shared across different platforms and devices.

ICE lifts enterprise functionality into the cloud, innovating and unifying communications across your business.

Integrating with video conferencing

Videocall's ICE cloud services can integrate video conferencing estate with Skype for Business as well as providing high quality bi-directional content sharing among Skype for Business and standards based endpoints. This creates a highly collaborative video meeting experience, shared among disparate devices and networks.

Integrating Skype for Business with ICE:

Videocall's ICE cloud solution offers native support for Microsoft Skype for Business, giving your employees the chance to work via an interface they are familiar with. Users can remain in the environment they are used to whilst creating and joining video meetings from their enabled mobile devices, desktop or video conferencing room systems. Skype for Business users stay in their environment, whilst room based devices stay in their environment, maintaining the best quality for both communities of users.

Professional Services:

Videocall will work with your existing technology to create a long and short term strategy to design and implement a core infrastructure service that will transform your conferencing network into a communication platform that is central to your organisation's processes. Whether you choose to deploy Skype for Business or not, we can ensure your work force is engaged and connected globally, locally and working within an agile framework.

Key Features

On Premise or Cloud

On premise or cloud-based Skype for Business solutions.

Native Experience

Native content sharing experience for Skype for Business, Office365 and non-Skype for Business users.

Native Workflow

Harness Videocall's ICE platform while remaining in the native Skype for Business workflow environment.

Click to Join

Single click to join functionality using calendar, meeting reminder, IM or email.

Best of Both

Leverage the benefits of Skype for Business while harnessing Videocall's stringent security measures.

Key Benefits

Single click from any device – create an agile work force with the power to connect using single click functionality from any video enabled mobile or desktop device from any location: office, home, on the road.

Engagement and adoption – maintaining user experience and workflow by remaining in the Skype for Business environment promotes engagement and adoption while reducing in-house training needs.

Integrate with Microsoft – Leverage your use of Microsoft Office365 with Skype for Business.

Real-time co-authoring – Real-time, in conference co-authoring of documents, slides and annotation provides 'face to face' standard collaboration from multiple locations.
