

System Integration

Our Goal

Videocall will leverage your existing technology to design and implement video conferencing solutions that will transform your conferencing network into a communication platform that is central to your organisation's processes.

We will integrate best in class technology within your existing IT strategy to ensure you have interoperable video conferencing systems.

Key Features

- System agnostic design – service focused on business needs, scalability and future proofing
- Installation of complete video conferencing technology systems
- Highly skilled in-house engineers will carry out installations globally
- Integration with existing communications systems including Microsoft Outlook and Skype for Business
- Bespoke training services tailored to your existing systems, services and IT strategy
- A defined presales process that ensures full capture of our customers technical and business requirements

- Installations are carried out globally by our in-house team of experienced technical engineers who have the highest level of certification on video conferencing infrastructure systems as well as Microsoft MCSITP, Cisco CCNA and SIP accreditation

Why is it important?

Head of Solutions Engineering at Videocall, Richard Clayton, says:

“Technology never stands still, and in this day and age it is critical to the day to day running of every business. At Videocall we can help bring your systems together to ensure a seamless experience for users by integrating your core systems.”

As part of our professional services offering; Videocall's highly skilled consultants will discuss your business' requirements, understanding the full scope of your needs, and will then design a fit for purpose solution that ensures successful integration of your systems, leveraging existing investments and maximising the available features of your technology”.
